FEATURED REVIEW

Title:

Very nice monitor

Date: June 25, 2010

Product Uses:

work, play

Review:

Received this monitor on 25-Jun-10 which was 4 days after I ordered it so I have to say that Dell ships quickly (and for free in my case) so I'm real happy about that. I bought this as a replacement for an older ViewSonic TN panel. Setup couldn't have been simpler. Literally took about 3 - 4 minutes to disconnect my old monitor and get this one powered up. I really like the controls on the right side of the monitor. They're simple and intuitive. I have this hooked up to a VGA port for my work PC and a DVI port for my home PC. Both look incredible. It's doesn't look like it needs to be tweaked - the colors look spot on and it's not excessively bright at it's default settings. No dead pixels. Have looked at some video on Vimeo and it looks good. I'm not a gamer I'm not sure how well it works for games. For pictures it looks incredible. Glad I upgraded. Nice work for a good price Dell!

Title:

U2211H Monitor Review

Date: March 6, 2011

Product Uses:

Gaming, online business, cad, webcam

Review:

Okay, First off let's get real. There are a lot of reviews out there for a lot of products, monitors being one of them. You have to take each review with a grain of salt (not excluding this one either) because you don't know who wrote it, what mood they were in, or anything about the person. There are plenty of Naysayers out there, but don't let them fool you about not buying this monitor. This monitor Rocks! I'm a Serious PC Gamer, and I do ample business over the internet including some CAD too. I have a top of the line liquid cooled gaming rig and have recently moved to an eyefinity monitor setup. That's my background.

Pros-Astonishing Pictures, Ergonomics and ease up the wazoo, Relatively low response time for an IPS Panel, Portrait mode or regular, Connections up the wazoo, Modularity, easy breakdown/setup.

Cons-Backlight bleeding may be excessive for some. No HDMI.

Bottom line. areat monitor. Test it out if you can before you buy it. as everyone one

should. But I promise you that it's a great deal for an IPS monitor, and is pure quality. Great Job Dell!

Review:

I got two of these to replace a 24" Trinitron CRT (that was a beautiful monitor). I knew the pros and cons of LCDs and was expecting this monitor to be completely inferior to my old one but I'm happy overall w/ this purchase.

Pros:

- Color accuracy is good. It's not a high end Eizo or NEC but it's also a fraction of the cost. This is a great budget monitor for photo editing and I don't think there is another IPS monitor in this price range
- Horizontal viewing angles are very good. Vertical angles aren't as good but not bad and definitely superior to a TN panel
- After calibrating both monitors, the image is very consistent between the two. I got them both to look nearly identical and can only see differences if I'm really looking for them
- The stand is great. I was planning to buy one of those desk mounted arms but the stand is very adjustable

Cons

- Backlight bleeding is pretty bad at the edges. I never notice it except when I'm booting up the computer and when I'm watching movies w/ dark scenes so it doesn't bother me much but might be an issue for others
- The power button sucks. I like that all the buttons blend in w/ the bezel and give the monitor a very clean look but every time I adjust the angle or height, I often accidentally turn off the monitor because of the placement of the power button on the lower right of the bezel. On one of the monitors, pressing the power button once will sometimes register twice, eg, I press the button to turn off the monitor but the screen blinks and turns back on
- The USB hub on one of the monitors is always malfunctioning even if I have nothing connected to it. I've had similar problems on past Ultrasharp monitors
- Video is where I miss my old monitor. It's actually pretty good considering the slower response time but it's noticeably not as smooth as a CRT. I haven't played any FPS games yet but RTS games are ok.

Bottom line, this is a great monitor for photo editing and graphic design. It's not the greatest but it will be hard to beat at this price range. It has the drawbacks that any LCD would have but they're really not that bad. It would've been nice if it was 1920x1200 but 1080 seems to be the trend these days
